FLU SEASON IS STARTING GET READY NOW!

U.S. EPA REGISTERED INFLUENZA A VIRUS PRODUCTS*
DISINFECT AGAINST 2009-H1N1 SWINE FLU

**SPRAY NINE® KILLS INFLUENZA A VIRUS
IN ONLY 30 SECONDS!**

When cleaning and disinfecting are of prime importance, Spray Nine gets the job done. No other product can dig out tough soils on hard surfaces like Spray Nine. It cleans where others fail! And Spray Nine disinfects in only 30 seconds for viruses and 45 seconds for bacteria! Use Spray Nine to disinfect against germs such as Influenza A, MRSA, Coxsackie Virus, RSV, and more!

Using Spray Nine cuts chemical spending budgets by effectively consolidating separate products for cleaning, degreasing and disinfecting. The VOC-compliant formula replaces heavy solvent cleaners. This helps improve indoor air quality and reduce dangerous fumes while in storage.

*According to the U.S. Environmental Protection Agency, "EPA believes, based on available scientific information, that the currently registered influenza A virus products will be effective against the 2009-H1N1 flu strain and other influenza A virus strains on hard, non-porous surfaces." Spray Nine is currently approved by the U.S. EPA (EPA Reg. No. 6659-3) for disinfecting against Influenza A in only 30 seconds!

IS YOUR OTHER DISINFECTANT REALLY WORKING?

Only if you leave it wet on surfaces for as long as the label indicates. High contact time (10 minutes) requires you to re-spray product onto the surface to keep it wet. This means more product use, possible surface damage and less efficient use of time.

**USE SPRAY NINE TO DISINFECT AGAINST VIRUSES IN ONLY 30 SECONDS,
BACTERIA IN JUST 45 SECONDS!**
